

Robotic future for Outline?

Outline is to showcase "history's first robotized loudspeaker enclosure" at Earls Court. The COM.P.A.S.S. COMpact Polar Adjustable Sound System features a sophisticated mechanism moved by five monitors, enabling simultaneous adjustment of vertical and horizontal directivity.

Featuring a total of seven loudspeakers, the system also incorporates a built-in laser system to enable accurate dispersion adjustment. Sound designer Guido Naselli comments of the new offer: "Users will have at their disposal a system that can be adapted to suit any possible situation, according to the audience to be covered."

Outline is also debuting the D.V.S. series (Digitally Voiced Speakers), designed for temporary and permanent installations. The three launch models are D.V.S. 8, D.V.S. 12 and D.V.S. 15, and have been designed to maximise control of 'mid-high' frequencies. The IS 8 Installation Series two-way enclosure - completing the IS range - will also be premiered for the
