

Outline UK (N40)

Outline will introduce its Compass loudspeaker system, which now incorporates robotics: five servomotors can adjust the horizontal and vertical dispersion, controlled via software from the FOH console. The company will also show the Da Vinci Series, which comprises five new mid/high packs, and is designed for use either as a monitor or satellite wedge. The 813 completes the range - an 8" speaker with soft dome tweeter for studio and install use.
