

OUTLINE TWIN PULSE SERIES

Website: www.outline.it

The necessity of ease of transport and therefore light weight, combined with high power, are now featured in the new Outline "T" Series PWM amplifiers in Class "AD" with switching power supply (patented technology). The use of a 250 kHz sampling rate, an output stage with very high polarising current and the adoption of innovative D/A power conversion systems are some of the solutions adopted to ensure maximum performance in the audio spectrum, thus allowing state of the art performance to be achieved. The series comprises the T 4.5 (4500 W on 2 ohm - 9.5 Kg) and T 6.5 (6000 W on 2 ohm - 9.5 Kg).
