

SIB 2006

The mood on the **Outline** stand was buoyant, fresh from having systems installed in Piazza San Carlo and Piazza Castello for the Winter Olympics. In addition, 40 Butterfly CDH 483 Hi-Packs were used alongside the five Olympic Rings in Turin's Olympic Stadium to support the opening and closing ceremonies. There was time to relax though, and SIB offered a hat-trick of new products - the Mini-Compass, a self-powered loudspeaker system for standalone use or to be combined with other elements to form a vertical line array, the Subtech 218 SP and the Genius M412 matrix. Giorgio Biffi was pleased with the amount of traffic coming through the show and affirmed that it was a 'brilliant venue'.
