

## Outline releases the Globe Source Radiator

**International:** The Italian manufacturer Outline, a Sustaining Member of the Audio Engineering Society, announces the release of the **Globe Source Radiator [GSR]**, an innovative omnidirectional loudspeaker for acoustical measurements. A companion matching 4-channel 500W/channel power amplifier with built-in noise source and wireless remote control is also available. The nominal sound power level is 125dB with this miniaturized matching Outline power amplifier and has less than 0.5dB power compression, but the source can deliver up to 130dB with more powerful power amplifier with the same power compression. The GSR and Outline miniaturized power amplifier can be configured to power selected drivers to obtain different radiation patterns, useful for approximating musical instrument sources. An optional powered subwoofer extends the response to 40Hz. The warranty is 2 years parts and labour. Pricing is available for 3 standard configurations: Basic System (user provides power amplifier), Upgrade System [includes Outline power amplifier, noise source, and radio remote control], and Full-Range System [full Outline system with subwoofer].
