

*The Hungarian State Opera House.*

comprises sixteen Butterfly CDH 483 Hi-packs and eight Victor Live subwoofers; all powered and controlled by T series digital amplifiers and Genius 24 processors.

"The first time we used the system – to learn how to install and use it – was a great experience. In just an hour, we achieved a sound that was more than reasonable, and that same day obtained very impressive results from the system. All the experienced sound engineers were satisfied with the new system," explained Tamás Ditzmann, Arton's owner.

"The Butterfly system's real debut was at a Dance Festival staged in the Opera House. The results were excellent and the Opera House's head sound engineer appreciated the Butterfly as an extraordinary, high standard sound reinforcement system. Some of the dance productions had live musicians and others used pre-recorded music, but the system worked excellently with both. We measured a difference of just 4dB between the front row and the seats farthest from the stage, but the subjective difference was even less."

## **SHURE GAIN AN ALLY IN TC GROUP**

Announced at the recent NAMM Show in Anaheim, Shure Incorporated and the TC Group A/S have announced plans for a strategic alliance focused on technology sharing. The companies intend to work together to develop innovative networking solutions to enhance system performance, yet simplify system setup and use, for the professional audio market.

"In a world that is becoming more integrated and connected each day, we think it is more important than

## **OUTLINE BUTTERFLY BOWS IN BUDAPEST**

Italian manufacturer Outline, recently delivered a Butterfly line array loudspeaker system to Hungary, where it was put into immediate use in the stylish setting of the Budapest Opera House, home to the Hungarian State Opera. The system was sold to Arton Ltd., by Zaj Discotechnika, the exclusive distributor for the region, and
