

## **OUTLINE GLOBE SOURCE**

Italian loudspeaker manufacturer Outline has released the Globe Source Radiator, an omnidirectional loudspeaker for acoustical measurement applications and matching four-channel, 500W/channel power amplifier with built-in noise source and wireless remote. The nominal power level is 125dB with less than 0.3dB power compression, but the source can deliver up to 130dB with a more powerful power amplifier with the same power compression. The GSR and power amplifier can be configured to give different radiation patterns, while an optional powered subwoofer extends the response to 40Hz.
